

1. HTML Basics 1

This video has information about setting up an Apache web server, and connecting it to the sublime text editor and hosting a basic HTML website on the localhost

2. HTML Basics 2

The video gives a very basic knowledge of links and forms in HTML.

3. Difference between static and dynamic website —

The video shows that a static website is a website that has fixed or stagnant content. This means that the content of the website does not change, and it is usually written in HTML code.

A dynamic website is a website that is generated by an application server. This means that the content of the website can change, and it is usually generated from a database.
